## Business Intelligence System

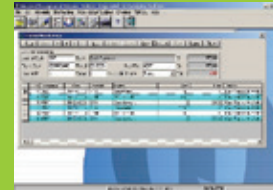

Easy to Use Interface

Customised Reporting

Email Enabled

Fully Integrated

## overview

The Cycom Business Intelligence System, constitutes a complete, dynamic and affordable solution which provides the management with the capability to make smart business decisions.

The Cycom Business Intelligence System provides a comprehensive set of tools and features which deliver a complete range of Business Intelligence capabilities: 'Reporting, Analysis and Graphs.'

The Business Intelligence System is particularly useful for directors, managers and executives who wish to analyse and record possible trends in organisational performance.

This useful tool can serve the needs of SMEs by ensuring indepth analysis, processing and presentation of business information.

Cycom Business Solutions Ltd provides powerful software solutions for today's demanding and competitive business environment.

Their easy-to-use graphical user interface increases user productivity and enables business workgroups to manage financial information more effectively.

## features

### Flexible

The Cycom Business Intelligence System offers unrestricted flexibility by allowing you to customise the output of the configured reports and charts according to your business requirements.

### Simple to Use

The Cycom Business Intelligence System, constitutes a simple-to-use and comprehensive solution, which enables the company to shape its business strategy.

### Multiple Data Analysis

The analysis of data is capable of being performed at multiple levels, in combination from multiple sources and thus, deriving the corresponding outcome in multiple formats and graphic capabilities.

### Statistical Queries

The primary mechanism for retrieving information from any database and which consists of elements presented to the database in a predefined format.

### Integrated

The Business Intelligence System is fully interfaced with the CYCOM Product Suite and provides instant information and access to all relevant data.

### Drag & Drop Functionality

The System allows the user to define the primary and secondary elements, to build its customised analytical cube and finally drag and relate the content of the vertical or horizontal bar accordingly.

### Multiple report formats and graphic capabilities

The data may be processed in multiple formats and various graphical displays may be extracted.

### Fully accessible Business Intelligence solution

The Cycom Business Intelligence System is fully accessible. Multiple databases may be connected and multi-dimensional data analysis may be performed. Further, data export may take place in many alternative formats.

Easily enabled installation process which allows instant operational flow.

Users will benefit out of the simplicity features of the system and those aware with the Windows Operating System, shall indeed find it user friendly and easily adjustable.

New advanced capability for companies that have migrated to a new application without the need for export & import of files or data conversion amongst legacy systems.

When the refresh function is utilised, then all statistical queries for all users are being updated.

Any report which has been designed under any category, may be recalled for future reference with the updated information relevant to the specific report.

The Cycom Business Intelligence System has online connec-

tivity with the CYCOM Product Suite. In addition, the capability exists for connection with any third party database, once requested.

Once data is being processed, it may be exported in multiple formats for further utilisation.

Explore through large complex database sets using the advanced drag-and-drop techniques. Among others, drill down through the multiple levels of analysis and details and manage to view different aspects of the business, such as sales by area or per product category.

The Cycom Business Intelligence System provides the user with the capability to obtain personalised views of key information.

The user may easily drill down, rank, sort, forecast and filter information to gain greater insight into business trends, causes and effects.

It enables business people to make smarter business decisions by having access to the required information, without relying on IT. A single report, can be accessed in various formats, applications, graphs or bar chart formats.

## standard reports

The System provides an unrestricted number of Reports to help the user keep track of the business.

All reports can be viewed on screen or sent to other Windows applications such as Excel, Word, Acrobat and others or sent by email. The reports are parameterised and are produced based on the criteria provided by the user.

All database fields can be reflected into a selected range of fields which can be displayed on any custom-made report. The series of reports can range between Financial reports, Inventory reports and Sales and Purchases Reports. The only pre-requisite is the existence of the relationship of the field between the tables of the database.

All reports can be categorised, saved and retrieved for future reference in order to enable the business people to follow actual trends and take smart decisions.

Reports can be previewed on the screen and can be printed on any printer installed on your Windows System. The reports viewer allows you to export reports to a variety of popular formats such as Excel, Word, Acrobat and others.

## key-features

- ✓ Fully integrated - the system is fully interfaced with the CYCOM Product Suite
- ✓ Drag & Drop - easily form the relationship between relational fields from the tables of the data-base. That is, build instant reports by constructing your analytical cubes.
- ✓ Multiple Data Analysis - the analysis of data is being performed at multiple levels, in combination from multiple sources and thus, deriving the corresponding outcome in multiple formats and graphic capabilities.
- ✓ Multiple report formats and graphs - the data may be processed in multiple formats and various graphical displays may be extracted.
- ✓ Fully accessible Business Intelligence solution - multiple databases may be connected and multidimensional data analysis may be performed.
- ✓ New capability for statistical information migration - for companies that have migrated to a new application without the need for export & import of files or data conversion among legacy systems.

Online connectivity to the CYCOM Product Suite - the system runs on an online mode with the CYCOM Product

- ✓ Suite.
  - Extensive bank accounts - unlimited number of bank or cash accounts can be held by the system.
- ✓ Instant Personalise View of Reports - the user has the capability to obtain personalized views of the key information.
- ✓ View and analyse data relationships graphically - the user can drill down, rank, sort and filter information, which can further be viewed in graphical forms.
- ✓ Enhanced visualisation - This capability regarding the statistical information allows business people to take smart decisions. A single report can be accessed and extracted in various formats, applications, graphs or bar chart formats.
